

Miss Stay's Science challenge...

Can you make a rain shelter for a toy that can withstand water?

Your challenge is to use whatever materials you like to make a shelter for an action figure that can withstand water. Try to be as creative as possible and think carefully about the materials you choose. The shelters should be strong and waterproof. Please also create a short poster/leaflet explaining what materials you have chosen and why. There will be a science kit prize for the winning entry from each key stage. Hand your entry in to your class teacher by Wednesday 18th December.
